Nguyen Van Huan

Computer Engineering Student

0964483919 huan.elenoa@gmail.com Hanoi, VietNam

PROFESSIONAL SUMMARY

Second-year Computer Engineering student at HUST with a stellar academic record (GPA 3.94/4.0) and a strong foundation in object-oriented programming, system architecture, and mathematical modeling. Passionate about solving complex, real-world technical challenges through versatile applications of Web Development, Systems Programming, and Artificial Intelligence. Known for a strict "build-test-iterate" mindset and cross-domain adaptability. Seeking a Software Engineering or IT Internship to contribute to scalable products while continuing to expand technical horizons.

EDUCATION

Hanoi University of Science and Technology (HUST) 2024 - Present

Computer Engineering

GPA: 3.94/4.0
Highlights: Solid foundation in Object-Oriented Programming (Java/C++) and system optimization. Currently preparing for an upcoming international academic exchange program to broaden technological perspectives.
Certifications: TOEIC 730 (Professional working proficiency).

TECHNICAL SKILLS

Programming Languages	Python, C++, Java, JavaScript (Node.js).
Artificial Intelligence	Deep Learning (CNNs, Transformers, PhoBERT), Computer Vision (YOLO, 3-D Kalman Filter), NLP.
Web & Systems:	MERN Stack (MongoDB, Express, React, Node.js), Windows APIs, Docker, WSL, Virtual Machines.
Hardware & Embedded:	Microcontroller Development (Arduino, ESP32), Sensor Integration.
Tools & Deployment:	Git, Vercel, Render.

PROJECTS

AuraBeam - Adaptive AI Headlight System | *Python, C++, YOLO, Hardware* 3/2026 - 5/2026

First author

First Author: Wrote and submitted a comprehensive research paper to the international journal *Machine Vision and Applications*.
Designed an embedded system that synchronizes AI model inference (Python) with microcontroller execution (C++) to automatically direct headlight beams and prevent glare.
Integrated a 3-D Kalman Filter and Weighted NMS algorithms to resolve object-tracking failure cases at high speeds.

Sentiment Analysis Pipeline | *PhoBERT, Deep Learning* 12/2025 - 3/2026

AI Developer

Built an NLP pipeline designed to evaluate brand perception and market trends during media crises by analyzing social media text data.
Executed rigorous data preprocessing and continuous hyperparameter fine-tuning, successfully driving the model to achieve an **F1-Score of 0.83**.

ACTIVITIES & ACHIEVEMENTS

Scientific Research Paper Author: Finalized and submitted an in-depth research paper on computer vision to the prestigious international journal *Machine Vision and Applications*.

Top 2 Technology Showcase: Successfully demonstrated a fully integrated hardware-AI prototype, proving the ability to turn theoretical models into highly applicable physical products.

University Scientific Research Network: Active participant in tackling complex engineering problems within the AI landscape at HUST.

Student Innovation Competition: Engaged in developing new technological solutions, demonstrating a sharp mindset for applying technical skills to real-world issues.

HOBBIES & INTERESTS

Reading, Fitness/Gym, Personal Finance (ETFs/Index Funds).
